Today in the markets

Markets were driven by US macro data, Fed expectations, and geopolitical headlines last week. July's Producer Price Index jumped 0.9% m/m and 3.3% on a yearly basis, the fastest pace in three years, while retail sales also came in stronger than forecast. These readings reduced the likelihood of a supersized 50 basis point Fed cut in September, though futures still imply an 85% probability of a smaller 25 basis point move. Attention now turns to Fed Chair Jerome Powell's remarks at the Jackson Hole symposium for clarity on the policy path.

President Trump's meeting with President Putin failed to secure a ceasefire in Ukraine, but both sides indicated progress on a framework. Trump is expected to host Ukrainian President Zelenskiy in Washington to push for a near term settlement. US equities ended the week higher despite hotter inflation data. Dow Jones advanced 1.74%, S&P gained 0.94%, and Nasdaq climbed 0.81% weekly, all three closing at fresh record highs, supported by optimism over eventual Fed easing.

In Turkey, CBRT published its third Inflation Report of the year, maintaining the 2025 year-end forecast at 24% while setting a projection range of 25%- 29% due to heightened uncertainty. For 2026, the Bank revised its year-end forecast upward to 16% from 12%, while keeping 2027 at 8%. Governor Karahan emphasized the adoption of interim targets as new policy anchors, underlining a commitment to disinflation. Meanwhile, foreign investors extended their net equity purchases for a third week, adding USD 79.9 million. BIST 100 slipped 0.93% to close at 10,870, while the lira weakened 0.36% to 40.80 per dollar last week.

Market development:

Banking Sector: Regulation from TCMB on credit growth restrictions

The Central Bank of the Republic of Turkey (TCMB) has decided to apply credit growth limits for 8-week periods instead of 4-week periods.

While credit growth rates remain unchanged, they have been updated to align with the 8-week period. This decision aims to enhance the functionality of market mechanisms and strengthen the monetary transmission mechanism. The decision was published in the Official Gazette.

Deniz Invest Model Portfolio

Deniz Invest Model Portfolio is a medium-long-term stock recommendation list prepared by the Deniz Invest Strategy and Research Department according to fundamental analysis criteria. The positions taken are long only. There is no numerical/percentage return target. There is no limit on the number of companies. There is no obligation to make changes in any frequency/calendar. Strategy and Research Department analysts have the right not to change the portfolio within the calendar year if market conditions do not allow it. Even if there is no return potential for the companies in the portfolio in terms of fundamental analysis (as a valuation), they can continue to remain in the list with their past and future trust in the company brand. There is no obligation for companies in the portfolio to have a BUY recommendation. Department analysts can also choose companies within the list with their HOLD and/or Under Review (UR) suggestions.

Deniz Yatırım analysts evaluate stocks in light of potential catalysts, triggering developments, and risks, as well as market, sector, and competitor developments. After publicly disclosing general investment recommendations, our analysts closely monitor stocks. However, if stock price fluctuations cause values to exceed the limits of our rating system, our analysts may choose not to change their recommendation regarding the stock and/or place it Under Review (UR). There is absolutely no time constraint for our analysts in terms of rating and/or recommendation updates in the event of a potential UR. From a valuation perspective, if there is mathematical potential for an increase or risk of decline, our analysts may make recommendations outside the BUY-HOLD-SELL framework. They consider the general trend and recent developments in the sector and company beyond potential return levels that form the basis of the rating. In such cases, the evaluation may consider various factors, such as general sector conditions, potential risk and return, parameters in the latest financial statements, and political and geopolitical factors. Our analysts do not use a mechanical process that only considers mathematical values when making BUY-HOLD-SELL recommendations.
