

Intertech has implemented the first and only financial cloud platform of Turkey, **inter-Cloud**

DenizBank's technology subsidiary Intertech has offered inter-cloud, the first and only financial cloud platform approved by the Banking Regulation and Supervision Agency (BRSA), for the entire financial industry and start-up ecosystem.

With a regulatory compliant and system-outage resilient structure, Intertech's financial cloud platform **inter-Cloud** significantly contributes to financial inclusivity by offering an infrastructure required by the finance industry and especially start-up's that produce payment system solutions with low costs. Important advantage is gained in decreasing operational workload of companies through these managed services.

Nearly 30% of the software of banks in Turkey are in the hands of Intertech

Giving a statement on the topic, **Intertech General Manager Ömer Uyar** said that they produce end-to-end hardware and software for 49 companies in 11 different countries with close to 1350 employees comprising engineer groups in majority. He continued, "We are working hard to provide a fully equipped technological aid to support the digital transformation journeys of financial institutions. We produce software for 16 banks in Turkey and 10 banks abroad. Besides, we serve 10 companies that operate in e-money and card payment systems. We sell the software we produce and help our country export technology on a global scale. We also have analytical solutions and financial applications supported with data mining and AI, along with core banking solutions."

We will continue to focus on future technologies and the future of finance

Stating that they have invested in high-technology since day one and have actualized inter-cloud, the first and only financial cloud platform of Turkey as the last fruit of their efforts, Uyar said "We offer all advantages of cloud technologies over a single structure with minimum cost via inter-cloud. As the system infrastructure offers accessible prices, it brings an important advantage for the start-up ecosystem that has financial strains. We also think it is important to ensure business continuity through secondary systems at Disaster Recovery Centers in cases of outages in financial industries. We answer an important need on uninterrupted business continuity by ensuring 100% of critical data to become up and running in DRCs and returning to primary systems under normalized conditions. We are proud to be awarded first place in "Digital Infrastructure of the Future" at IDC Awards with our product. As Intertech, we will continue to focus on future technologies and the future of the financial industry".
